

# NICHD Breakout Session

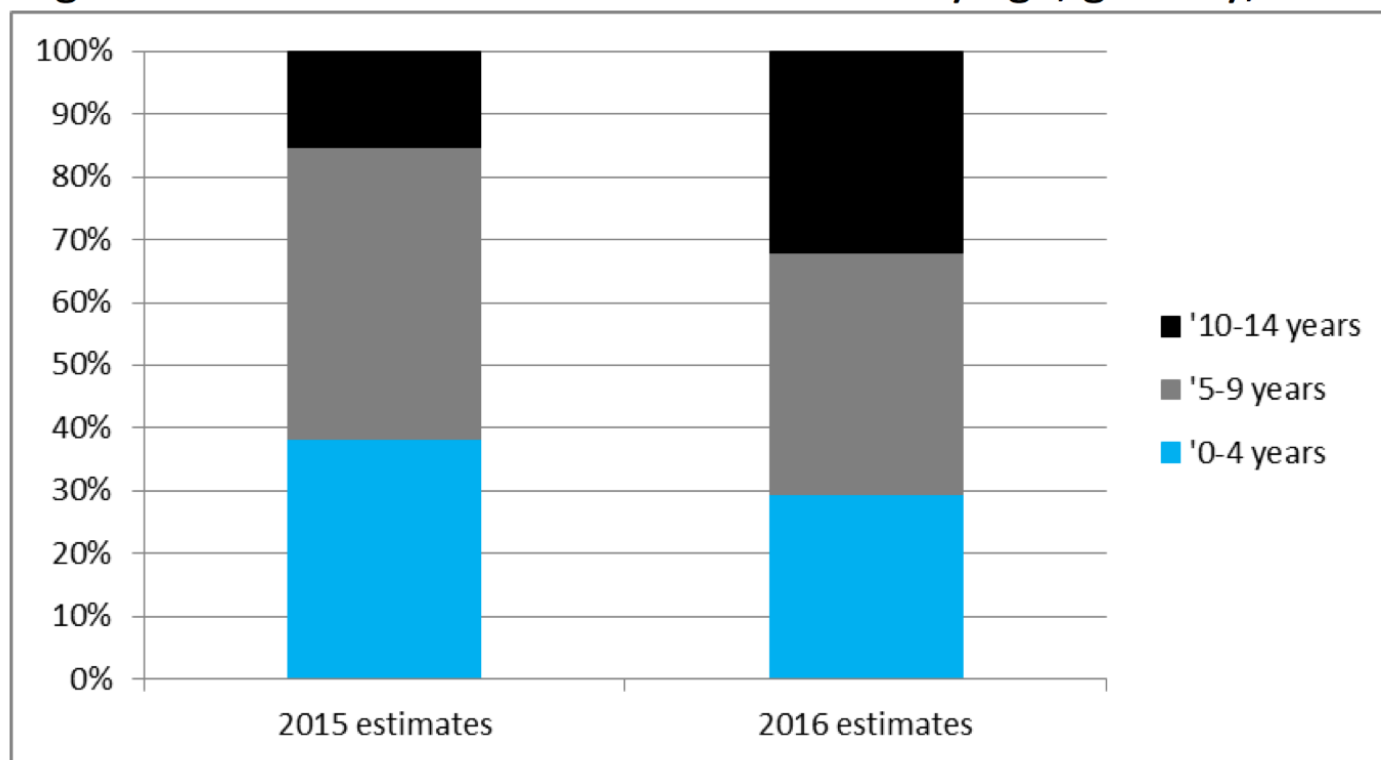

leDEA Annual Meeting

June 2016

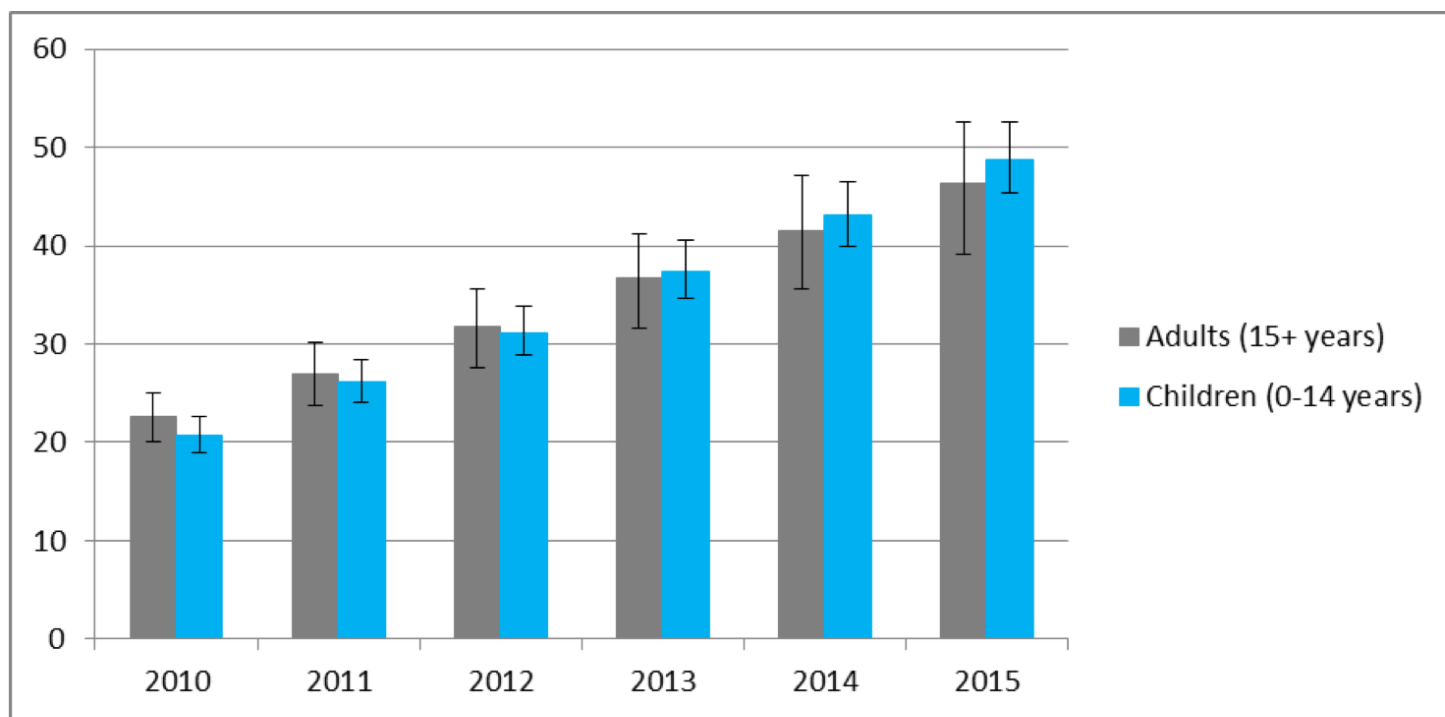

# leDEA changing global peds estimates

- leDEA regional data to be used as the defaults in Spectrum until countries have ***age-disaggregated antiretroviral data*** of their own
  - Key factor: When ART is started
- Immediate impact on mortality and ART coverage data

## Distribution of age at which children are initiated on ART by age, globally, 2014

## Antiretroviral coverage among adults and children, globally, 2010-2015

# Questions

- What does this mean in terms of the value of leDEA infant/peds/ado data?
  - Responsibility for (interest in) regular updates for Spectrum?
- When/if countries age-disaggregate their data, how will leDEA data be used?
  - Opportunity for comparative analyses?
- Management of ongoing collaboration?
  - Falls under “external data user” request category
  - Engagement with Strategic Data Working Group
    - Avoidance of “global dubs” while optimizing efficiency
